

TACTICAL COMMAND VEHICLES (TCV)

- + **Multiple connectivity solutions, including on-the-move satellite**
- + **Interoperable voice, video, and data systems**
- + **Off-pavement and off-grid capable for the most challenging operations**
- + **Deploys quickly and safely by anyone, with minimal training**

THE WORLD'S BEST-CONNECTED, MOST CAPABLE MOBILE OPS PLATFORM

Traditional command vehicles are not always suited to challenging environments. Add the problems of disparate components, sluggish deployment, and the need for specially-trained operators, and the “bigger is better” mindset begs rethinking.

Enter the Tactical Command Vehicle (TCV), the best-connected, most capable mobile operations platform in the world. The ideology is simple: Eliminate complexity, create no separate systems. This fully-integrated platform has proven successful in defense, public safety, UAS, utility, telecom, and other applications worldwide.

It's spawned a line of solutions, including the TCV-X with its larger work shelter, and the TCV-Max with the large shelter mated to a double-cab chassis for even more flexibility. Add the fast-deploy Tactical Communications Trailer (TCT) and you have a dynamic team of high performers ready to serve anywhere, at any time.

Get to where you're needed, deploy faster, serve more effectively.

Aircraft load planning? TCV's are ATTLA Certified. Contact us for info.

TACTICAL COMMAND VEHICLES (TCV)

TCV // GAME CHANGER

In 2005, the Bureau of Indian Affairs needed a fast-deploy mobile command solution to serve millions of remote acres. What started as a collaborative napkin sketch evolved into a platform that now serves organizations of all types in need of strength, connectivity, and on-the-move operations.

TCV-X // GIVE ME SHELTER

The Nomad TCV-X puts the technical performance and off-pavement prowess of the original TCV on a longer single-cab chassis, for missions requiring less on-the-move workspace. The command shelter is larger, and configurable with up to four ergonomic workstations, plus additional seating.

TCV-MAX // THE BOSS

Looking for maximum on-the-move and command shelter workspace? TCV-Max answers the call. Available options add high ground clearance, heavy-duty rolling gear, additional configurable storage space, exterior attachment points, and more. When you need efficiency en-route and on scene, Max has your back.

DEPLOYMENT STORY // WHERE OTHERS COULDN'T PASS

After Hurricane Harvey in 2017, a Nomad TCV pushed into Port Arthur, Texas (view from the dash at left), passing stranded command vehicles that couldn't navigate the flooded roads. That TCV would prove vital to early communications efforts at a makeshift hospital. [Read More: bit.ly/5readiness](http://bit.ly/5readiness)
